

# INNERMOST DESPAIR /CONFIGURATION GUIDE

## PREFACE:

**BLUE lines** are decorative options, these options define how I expect the map experience to behave, anyway you can change them if you want.

**ORANGE lines** mean highly recommended options, also you may change them if you know what you are doing.

**RED lines** are critical options because they will affect your gameplay experience, so you should really set it as this document states.

## VIDEO MODE

Set your resolution, may not appear until you switch [aspect ratio] to 'all'

*It's easier to do the configuration in windowed mode while reading this and then switch to full-screen.*

## DISPLAY OPTIONS

- ✓ [Stretch short skies] 'Off'
- ✓ [Use fake contrast] 'Off'

## DISPLAY OPTIONS > OPENGGL OPTIONS > TEXTURE OPTIONS

- ✓ [Anisotropic filter] more = better & slower, for slow PCs 'x4' is OK.
- ✓ [Texture format] 'RGBA8'
- ✓ [Enable hires textures] 'Yes'

*From there I personally suggest two sets based on your graphical "tastes":*

*If you want a more classic, doom experience, or have a modest pc:*

- ✓ [Texture filter mode] 'Off'
- ✓ [High Quality resize mode] 'Off'

*If you want a more enhanced, fancy experience, set those:*

- ✓ [Texture filter mode] 'Trilinear'
- ✓ [High Quality resize mode] 'hq4x' (NOT 'hq4x MMX')
- ✓ [Resize textures] 'On'
- ✓ [Resize sprites] 'On'
- ✓ [Resize fonts] 'On'

*Don't be surprised; Doom makes an intensive cpu/gpu usage.*
